

## INSTRUCTIONS

# Preliminary checks on the domain name

Consulting the Registry's database at <http://www.nic.it/cgi-bin/StatoReg/index.cgi> to determine the state of registration of a domain name, one may verify the exact boundaries of the actual Registrant of the domain name.

In this way, an estimate of the presumed existence of the right to use the domain name on the part of the assignee (who is the subject against whom the complaint is presented) is obtained. Obviously, whoever intends to present the complaint should first determine if the right to the domain name indeed exists.
